

BASPS2 - ENCLOSURE SYSTEM DESIGN STRATEGIES

AIA Provider Number: 404109597

AIA Accredited Presentation (CEU & HSW): 1 Hour

SUMMARY

This presentation reviews the engineering and applicable building standards that modern perimeter systems employ. For projects requiring dumpster, mechanical, or recycling enclosures, or any other building adjacent exterior enclosures, the key is providing robust and long lasting solutions. This course also provides insight into the human component relative to the need for aesthetics while still fulfilling its intended purpose as a security-based solution.

SYNOPSIS

The fast-changing world of fence applications requires more diverse and specialized products. Secure perimeters can no longer rely on a chain-link fence or economical wood fence. Alternative steel products are solving the complex and layered requirements needed on project sites today. Terms like anti-climb, vehicular crash resistance, visual mitigation barrier, non-combustible enclosures, among others, are now how we refer to the needs and purposes for placing fences, gates, and perimeter security products. This presentation will take you through the baseline standards employed in the perimeter security industry, as well as look into some of the less often discussed psychological value these products provide through mitigating security breaches and providing user peace of mind.

Attendees of this presentation will learn:

- The thought and science behind a simple post, rail, and infill product, how we put those components together, and "everything else" that goes with it to stand out in the market and provide innovative and effective solutions for today's needs.
- Functionality and performance, including ASTM and other standards pertinent to fence enclosure systems and applicable performance and testing criteria.
- The impact of aesthetics to increase value, utilizing color, style and statement to attractively blend and hide other security features.
- The behavioral and emotional components that fences fulfill, and how perceptions become reality in the world of physical security.

BASTEEL

PERIMETER SYSTEMS™

YOUR STRONGEST INVESTMENT IN FENCING

ARCHITECTURAL

Aesthetic fence screening for rooftop equipment, mechanical / utility yards, HVAC, and dumpster or recycling areas

SECURITY

Fence and gate systems that provide varying levels of perimeter security to meet site needs

INFINITY GATES

Robust swing and cantilever gate systems to provide site access, ease of use, and longevity

"We appreciate the quality of the product that BASTEEL delivers - especially the support after the sale."

CONDA RICHARDS, R.A.
ENGINEERING FLIGHT CHIEF
U.S. AIR FORCE

ABOUT

BASTEEL is a 4th generation family-owned business founded in 1946. Our values, commitment to quality, and a focus on exceeding customer expectations drove our investment in the fencing industry. Our products have earned a strong reputation for superior durability, performance, and aesthetics.
